

There is only ONE *Silent!* RADIO —the **DICTOGRAPH!**

- Made and patented by Dictograph.
- Employs the tonal fork principle.
- Uses the Acousticon Mystic Ear.
- Transmits sound by bone conduction.

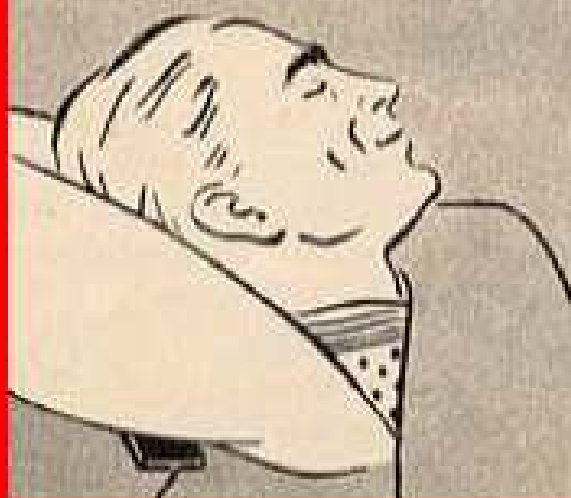

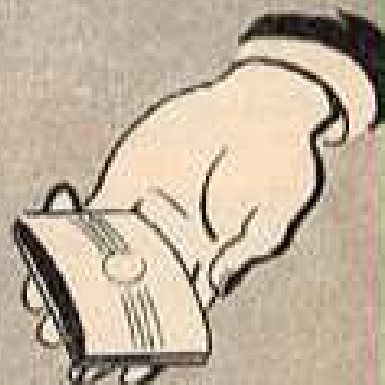

The Tuning Fork . . . Strike it! Hold it to the ear! Little or no sound is emitted.

But press it against a table and the table is put into resonance—vibrates—gives forth a musical note; right.

The Acousticon Mystic Ear functions on the tonal fork principle. Hold it in your hand—hardly a sound.

But put the Mystic Ear behind a pillow, lean your head against the pillow—and you hear! Remember—60% of that sound is heard through bone-conduction, inaudible to others even a few feet away.
