OPTIONAL MODULES AND ADAPTERS MULTIPLY USES

INFRARED RECEIVER MODULE

Receives sounds from 95kHz infrared transmitters. Compatible with systems used with home TV & audio, churches, performing art centers and movie theaters, etc.

FM RECEIVER MODULE

Receives sounds from most FM Systems used as assistive device transmitters. Very precise tuning covers all frequencies designated for the hearing impaired (72-76 MHz).

LOOP RECEIVER MODULE

Receives sounds from any induction-loop/audio-loop transmitter. Loop systems have been installed in many facilities which include churches, auditoriums, classrooms, and public meeting centers.

TELECONNECT MODULE

Converts any telephone into an outstanding amplified system and is very portable.
