

THE ALL-NEW
**SUPER
EXTENDED
RANGE**

THE WORLD'S FINEST
HIGH-FIDELITY HEARING AID!

The new Super Extended Range features an improved four-position tone control, and also a Zenith perfected "thermistor-controlled" circuit which assures more uniform performance in varying temperatures. The greater range of sounds reproduced and amplified by the Super Extended Range will enable you to hear more sounds, and hear them more accurately for greater understanding and hearing pleasure. With its standard earphone the Super Extended Range delivers a wide, smooth response, virtually eliminating annoying background noise, and puts all sounds in proper balance. Should you require greater gain and power, an alternate earphone is available which delivers the amplification needed for more severe hearing loss. Convenience features of this improved model include the Phone Magnet for greater telephoning pleasure, and a combination volume control and on-off switch. A 30-second test will prove how the Super Extended Range can help you hear again.
